                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     whose expression is upregulated or downregulated in specific cancers or cother diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a comparison of determining the presence or absence of the invention or by detecting a nucleic acid at least 80% identical to those of the invention also relates to expression vectors and host cells comprising a conclusic acid of the invention; antibodies which specifically bind a compression of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and mucleic acids. The nucleic acidis, polypeptides, can important to the conditions such as psoriasis, ischaemia, heart disease, can includies and other conditions such as psoriasis, ischaemia, heart disease, can therosclerosis, inflammatory diseases, autoimmune diseases, retinal consocularistaion syndromes, scarring and uterine fibroids. They may calso be useful in wound healing and in contraception. The present of the invention.

The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided they CR are not identical to Genhank sequences A1761441.1, A1594390, NM 004338 CC and AQ177461. Also included are expression vectors, host cells, the MIVR-1 contacting cardiac cell anti-apoptotic activity with a candidate CR amolecule having cardiac cell anti-apoptotic activity with a candidate CR CRX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining CR CRX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining CR CRX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining CR condulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring CR progression of such diseases and disorders as characterised by increased CR apoptotic cell-death of vascular endothelial cells e.g. cardiac CR hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart CR failure. The present sequence encodes human MIVR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ð.
      The invention relates to a novel human nucleic acid sequence of the CC pancreas and its encoded protein. The invention further comprises: CC proteins and peptides, preferably isolated, that contain a sequence ce encoded by the novel nucleic acid; and methods for diagnosis and contain a sequence ce in the protein or its DNA, including: an antisense oligonucleotide, short ce interfering RNA or ribozyme directed against the pancreatic protein, an cc organic molecule, particularly having a molecular weight below 5000, ce especially 300, that binds to the pancreatic DNA, an aptamer or ce (monoclonal) antibody, preferably human or humanized, that binds to the pancreatic DNA, an aptamer or ce monoclonal antibody, any of which may be derivatized with a reporter compout, cyrotoxic compound, immunostimulant and/or radioisotope. The novel fuman pancreatic proteins and their encoding DNA, have cytostatic compound, immunostimulant and/or radioisotope. The novel cartivity. The novel sequences are useful for inhibiting transcription cartivity. The novel sequences are useful for inhibiting transcription condours the proteins of the invention. Note: This sequence is not shown in the specification, it has been electronically downloaded from a DVD-rom provided with this specification by the European Patent confirms.
is not from a Office.

                                                                                                                                                                                                                                                                              ACC49493 to ACC49552 encode the human tumour-associated antigenic target (TAT) proteins given in ABP97175 to ABP97234. The present invention describes an isolated antibody that binds to a polypeptide having at least 80 % sequence identity to any of the 60 150-800 residue amino acid sequences (S1), given in ABP97175 to ABP97234, comprising (S1), lacking its associated signal peptide, encoded by any of the 60 2000-3000 base pair sequences (S2), given in ACC49493 to ACC49552. TAT proteins have cytostatic activity. The antibody can be used for treating or diagnosing tumours or cancers in mammals, e.g. prostate cancer, lung cancer, breast cancer, colon cancer, oversian cancer, prostate adenocarcinomas, renal
                                                                                                                                                                                                                                                                                                                                                                                                                                            New antibodies against tumor-associated antigenic target polypeptide, useful for treating or diagnosing tumors or cancers in mammals, e.g. prostate cancer, lung cancer, prostate adenocarcinomas or renal cell

The invention relates to a novel method for diagnosing and analysing coutoimmune disease or arthritides. The method comprises obtaining a containing mRNA, analysing gene expression using the mRNA cut that results in a gene expression signature of the mRNA corrections in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention conformation of further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis; in a mammal; an containing of a diagnosis of rheumatoid arthritis; in a mammal; an containing specific for rheumatoid arthritis; diagnosis or caray or gene chip, specific for rheumatoid arthritis; diagnosis or induced arthritis. The compositions of the invention have the following cartivities in an reducing the specific for rheumatoid arthritis; diagnosis or candidate drug in vitro for the treatment of collagentiduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, cantiduced arthritis, antionisment of the present invention are useful for diagnosing and treating autoimmune disease or arthritis, fibrositis, and an immune disease caused by an infectious agent. This polynucleotide represents a DNA sequence relating to the genes used in the analysis and cot shown in the specification. It has been supplied in an electronic format from WIPO.
Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating theumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and

Conservation in a year expression signature to diagnose or analyse the autoimmune disease correlates in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention of further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis; in a mammal content than a mouse; diagnosis of rheumatoid arthritis; diagnosis or array or gene chip, specific for rheumatoid arthritis; diagnosis or consultate of autoimmune disease or rheumatoid arthritis; diagnosis or conduced arthritis; and reducing the symptoms associated with collagentinduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiarthritis, dermatoid arthritis, and reducing the greening the control of the present invention have the following contivities: immunosuppressive, antirheumatic, and immunomodulatory. The control of the present invention are useful for the immuned disease or arthritis, supus, antylosing spondylitis, fibrositis, and an immuned disease caused by an infectious agent. This sequence is control shown in the specification. It has been supplied in an electronic format from MIPO. The invention relates to a novel method for diagnosing and analysing autoimmune disease or archritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNJ that results in a gene expression signature of the mRNA, and using that format from WIPO. the mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-
-obesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present invention describes performing differential gene expression analysis between the white adipose tissue (MAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, HMGI-C -/-, ob/ob, or HMGI-C -/- ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were
                                                                                                                                                                                                                                                                                            Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissue mice of different genotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human; adipocyte specific; ds; adipose tissue; anti-obesity; high mobility group I-C protein; HMGI-C; obesity; leptin; ob adipogenesis; hypertension; cardiovascular disease; anorectiantidiabetic; hypotensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADM67045

These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polynucleotide sequence is a human homolog of a murine adipocyte specific DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local Similarity

This invention describes novel cytostatic polynucleotide and polypeptide concerses which can be used in a method for diagnosing prostatic cancer. Or the risk of developing prostatic cancer. Diagnosis is based on the risk of developing prostatic cancer. Diagnosis is based on the risk of developing prostatic cancer. Diagnosis is based on the risk of developing for inhibitors of the sequences in compounds that bind are consumed the sequences of the sequence by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that the sequence patients, or subjects at risk, were incubated from the sequence of the second antibody; streptavidin-conjugated horseradish the sequence of the second antibody; streptavidin-conjugated horseradish the sequence of the sequence o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human; cytostatic; differential expres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human prostatic carcinoma derived DNA SEQ ID

This invention describes novel cytostatic polynucleotide and polypeptide cor the risk of developing prostatic cancer. Diagnosing prostatic cancer cancer. Inagnosis is based on contermining over transcription or over expression of the sequences in compostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are consustances involves a binding assay, any compounds that bind are consustances involves a binding assay, any compounds that bind are consustances involves a binding assay, any compounds that bind are consustances involves a binding assay, any compounds that bind are consustance in the polypeptide of the reporter indicates the presence of two predetermined minimum level of the reporter indicates the presence of two predetermined principles and consumer against the polypeptide; a (monoclonal) antibody (Ab) against the polypeptide, preferably humanised or human; an anti-idiotype, non-human consumer against the polypeptide; a (monoclonal) antibody (Ab) against the polypeptide, preferably humanised or human; an anti-idiotype, non-human concordinal antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or concers by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that concers and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples of opolymucleotide and polypeptide sequences used in the method of the polymucleotide and polypeptide sequences used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human; cytostatic; differential expres

                                                                           δ
                                                                                                      밁
                                                                                                                                                                당
                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel isolated nucleic acid associated with Crown prising 489 defined sequences given in the specification. The invention may be useful for the production of compounds with a cytostatic activity through the inhibition of expression or activity of tumour-associated proteins. The novel DNA sequences and the proteins/peptides encoded by them are used for detecting bronchial cancer or determining the risk of developing it and to screen for specific binding partners of the DNA or protein sequences, where the binding partners are potentially useful as agents for treating or diagnosing bronchial cancer. The DNA or protein sequences can also be used for prognosis, detection of metastases and for secondary treatment (of tumours that have been stabilised or are no longer detectable). Concercing abnormal expression of the DNA sequences provides early changes is of bronchial cancers. The present sequence is that of a novel bronchial cancer-associated human gene sequence of the invention.
                                                                                                                                                                                                                                                                                                                                Query Match

The nucleic acid sequences of the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.

RESULT 12
ACN40804
The invention relates to human tumour-associated antigenic target (TAT) copypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus coverexpressed in cancer tissues compared to normal tissues, and may thus coverexpressed in cancer tissues compared to normal tissues, and may thus covered as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide copypeptides; expression vectors and host cells comprising a TAT nucleic color antibody specific for a TAT polypeptide; a peptide or organic conlecule which binds to a TAT polypeptide; apptide or organic concerule which binds to a TAT polypeptide; and proteins comprising a concerule cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful concreased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder colorectal cancer, melanoma and leukaemia. TAT nucleic acids may further be cused as hybridisation probes, in chromosome and gene mapping, in corpresents a TAT nucleic acid of the invention corporates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           tumour; diagnosis; cell proliferative disorder; breast cancer; colorectal cancer; lung cancer; ovarian cancer; liver cancer; central nervous system cancer; bladder cancer; pancreatic cancer; cervical cancer; melanoma; leukaemia; hybridisation probe; chromosome identification; chromosome mapping; gene mapping;
